

HUGE: Uttar Pradesh, India Announces State Is COVID-19 Free Proving the Effectiveness of "Deworming Drug" IVERMECTIN

By **Jim Hoft**

Published September 15, 2021 at 7:30am

5423 Comments

The Gateway Pundit **previously reported** that COVID cases are plummeting in India thanks to new rules that promote Ivermectin and

hydroxychloroquine to its massive population. The 33 districts in Uttar Pradesh, India have now become **free from COVID-19 government informed on Friday**. The recovery rate has increased up to 98.7% proving the effectiveness of IVERMECTIN as part of the "Uttar Pradesh Covid Control Model." Of course, the media won't mention that Ivermectin is being used for the treatment of COVID-19.

This state has an estimated population of **241 million people** in 2021 and has the highest population in India. This is almost two-thirds of the United States population in 2021 and yet it is now a COVID-19 free nation.

So what could the United States be doing wrong? Let's ask Dr. Fauci.

Hindustan Times reported on this big development:

Overall, the state has a total of 199 active cases, while the positivity rate came down to less than 0.01 per cent. The recovery rate, meanwhile, has improved to 98.7 per cent. As per the state's health bulletin, Uttar Pradesh reported only 11 new Covid-19 cases and zero deaths in the last 24 hours.

India Today also reported on this last August 31:

The active caseload in Uttar Pradesh is down to 269, while the percentage of active cases against the total confirmed cases is 0 per cent.

The active caseload, which was at a high of 3,10,783 in April, has reduced by over 99 per cent.

Fresh Covid-19 cases in the state have remained below 100 for 50 consecutive days.

Of the 1,87,638 samples tested in the last 24 hours, 21 tested positive. In the same period, another 17 patients recovered from the infection, adding to

the recovery of over 16,86,182 people so far. (These numbers are in lakh so the comma placement is different in the US. 1,87,638 lakh is 187,638)

Uttar Pradesh is the leading state in India to use Ivermectin as early and preventatively in all family contacts. And this state is one of the five lowest COVID cases of all states in India despite having only a low vaccination rate of **5.8% fully vaccinated** compared to the USA that has **54% fully vaccinated**.

The USA has **179,289,983 fully vaccinated** as of September 14 while Uttar Pradesh has **15,236,150 who got their second dose**.

Cumulative Coverage Report of COVID-19 Vaccination

(As on 15 Sep'21 at 7 AM)

	Beneficiaries vaccinated		
	1st Dose	2nd Dose	Total Doses
	57,46,57,255	18,42,55,022	75,89,12,277
	(37,37,043 in last 24 Hours)	(23,78,647 in last 24 Hours)	(61,15,690 in last 24 Hours)

S. No.	State/UT	Beneficiaries vaccinated		
		1st Dose	2nd Dose	Total Doses
34	Tripura	24,77,947	10,54,402	35,32,349
35	Uttar Pradesh	7,45,35,619	1,52,36,150	8,97,71,769
36	Uttarakhand	70,70,268	24,34,640	95,04,908

People Vaccinated	At Least One Dose	Fully Vaccinated
Total	209,982,936	179,289,983
% of Total Population	63.2%	54%

Here's a little background on the use of Ivermectin in UP, The **Indian Express** reported:

"Uttar Pradesh was the first state in the country to introduce large-scale prophylactic and therapeutic use of Ivermectin. In May-June 2020, a team at Agra, led by Dr. Anshul Pareek, administered Ivermectin to all RRT team members in the district on an experimental basis. It was observed that none of them developed Covid-19 despite being in daily contact with patients who had tested positive for the virus," Uttar Pradesh State Surveillance Officer Vikssendu Agrawal said.

He added that based on the findings from Agra, the state government sanctioned the use of Ivermectin as a prophylactic for all the contacts of Covid patients and later cleared the administration of therapeutic doses for the treatment of such patients.

Claiming that timely introduction of Ivermectin since the first wave has helped the state maintain a relatively low positivity rate despite its high population density, he said, "Despite being the state with the largest population base and a high population density, we have maintained a relatively low positivity rate and cases per million of population".

He said that apart from aggressive contact tracing and surveillance, the lower positivity and fatality rates may be attributed to the large-scale use of Ivermectin use in the state, adding that the drug has recently been introduced in the National Protocol for Covid treatment and management. "Once the second wave subsides, we would conduct our own study as there has been an emerging body of evidence to substantiate our timely use of Ivermectin from the first wave itself," Vikasendu told The Indian Express."

Last August, the government of UP issued a notification to have Ivermectin (12 mg) tablets. **The Dialogue reported:**

"The government notification reads, "Doctors are advising to take ivermectin 12 mg to contain the impact of pandemic. This medicine is quite effective in protecting from covid-19. Therefore, we appeal each and every citizen to have this tablet."

The notification then goes on to explain the dosage: For positive patients isolated at home (one tablet per day for three days and for primary and secondary contacts (one tablet each on the first and 7th day)."

Even Australian MP Craig Kelly praises UP's Chief Minister for introducing Ivermectin as a preventive measure in a tweet last July.

WELL DONE to Indian State of UP & its Chief Minister [@myogiadityanath](#) for their effective management in crushing the wave

Brilliant that UP introduced 'Ivermectin' as preventive measure for health workers, patients & people exposed to infected people !!

<https://t.co/eYmCFBdgQx>

*– Craig Kelly MP (@CraigKellyMP) **July 12, 2021***

Both Uttar Pradesh and Delhi have seen an incredible drop in COVID-19 cases because they use Ivermectin early and preventatively. Whereas Kerala, a tiny state located in southern India that is over-dependent on vaccines and less dependent on Ivermectin, has been reporting a significant increase in COVID-19 cases. Keep in mind that Uttar Pradesh has eight times larger population than Kerala.

More information on Kerala's COVID-19 cases on [The Desert Review](#):

"While Kerala included Ivermectin in their state's guideline in April, they restricted it's use to only in Class B – severe cases or those with associated

disease, making its use much less than if mild cases were allowed. This meant it was reserved as a late treatment if used at all.

Finally, Kerala abandoned Ivermectin use altogether on August 5, 2021.

Juan Chamie, the Cambridge-based data analyst who has provided graphical insight and published on COVID, provided his answer to why Kerala's COVID cases have spun out of control.

"My main current explanation is the lack of early treatment. Kerala's COVID protocol from April 2021 included Ivermectin, but not as an early treatment. As a result, only a small group qualified, those in Category B patients having high-risk factors. The new protocol from August 5 is even worse. They removed Ivermectin (completely)."

Despite a widespread attempt by the media and WHO to convince the world that India has dropped Ivermectin by citing the DGHS, the ICMR and AIIMS have not changed their position, and Ivermectin remains in the India National Protocol."

Of course, the WHO, pharmaceutical companies, fake news media, and Fauci are not happy with this big development. New York Times will have a meltdown with this news.

Its not only Uttar Pradesh that got rid of Covid with Ivermectin.

Also Uttarakhand, Goa and many other Indian States.

They obliterated Covid with Ivermectin but of course the frauds at the FDA, CDC and W.H.O. do not recommend it for obvious reasons as its effective against Covid.

344  |  1 • Reply • Share >**ddkway** → Jacobs Tail • 7 days ago

This story has been the same across the middle of Africa and areas of Latin America countries. All not getting mainstream news coverage. Big Pharma, CDC, WHO, FDA, and Fauci all have blood on their hands because of an agenda of greed.

I know, but I want an antibiotic with it.

Covid leads to Pneumonia in a lot of cases.

Douglas Beachler → John (magnum) • 7 days ago

Cost me \$6 a tube for the apple flavored horse medication at my feed store. Works great, when I had the crud I took the first dose and felt better within 12 hrs. Antibiotics are worthless against viruses and can lead to resistant strains of bacterial infections like MRSA (BTW, I'm late 60s)

Speaking of the vax, a former WHO Vaccination Expert said recently that all vaccinated people must quarantine over the winter months or risk serious illness.

You read that right - the vaccinated are at risk of serious illness during the winter months.

The Shadow ➔ Daisy • 6 days ago

As soon as they are exposed to a wild virus they can develop Anti-body Dependent Enhancement and a consequent cytokine storm. The toxinated are at much higher risk of taking a dirt nap with exposure to flu viruses in the winter.

7 ^ | v • Reply • Share ›

Jim ➔ The Shadow • 6 days ago

Nonsense. Not one case has been documented

2 ^ | v 10 • Reply • Share ›

Jeff Bierlink ➔ Jim • 6 days ago

The ADE was documented as the result of every animal trial of the mRNA process. The nonsense is that you believe it will not happen simply because you don't want it to happen and that it has not happened yet.

7 ^ | v • Reply • Share ›

Chiefy_24 ➔ Jeff Bierlink • 6 days ago

You cannot reason with Jim. He must be a paid troll. He's constantly downvoting and making rebuttals to the contrary.

4 ^ | v • Reply • Share ›

DJSetay ➔ Jeff Bierlink • 6 days ago

It's LIKELY that ADE is already part of what is happening in the UK and elsewhere. UK has around 80% vaccination rates, and also has 8 times more people in hospitals than they did a year

That kind of math suggests ADE is in full swing and leading to more cases than pre-vaccine

Populist Right ➔ Daisy • 6 days ago

The Brit "medical experts" are saying the same:

Britain has pursued a mass vaccination strategy as aggressively as any country. It approved Pfizer's vaccine even before the FDA. More than 80% of Britons over 16 are now fully vaccinated.

But Britain is in far worse shape than it was at this time last year, when no one was vaccinated. It is now averaging about 140 deaths a day, roughly 10 times as many as mid-September 2020. And hospitalizations and deaths continue to rise.

British doctors now openly beg for more lockdowns because they say they can't rely on vaccines

From TheConservativeTreehouse.com:

“COVID Politics Takes a Dark Turn, Biden Administration Takes Control of Monoclonal Antibody Drugs in Order to Block Treatments in Red States and Ration Equitable Treatment

September 15, 2021 | Sundance | 196 Comments

When Joe Biden’s Health and Human Services made the announcement earlier this month (LINK) that they were taking full control over Monoclonal Antibody drugs (mAb) in order to begin rationing the highly effective treatment for COVID-19 infection, several people sounded alarm bells as there was the potential for rationing of COVID treatment based on political ideology. Representative Chip Roy of Texas was one of the first to raise concerns (link).

The change in HHS approach followed republican governor Ron
